Backup and Disaster Recovery

Synthetic educational example | Not clinical, legal, or operational guidance

Document ID: DEMO-EP-002

Status: Synthetic training example

Review interval: 12 months

Purpose

This fictional administrative policy describes ownership of backup and recovery planning. It does not specify real recovery times, clinical continuity instructions, or technical configuration.

Backup ownership

System owners maintain an inventory of critical services and their approved backup responsibilities. Backup jobs and access to backup media are monitored through the facility's documented information-security process.

Recovery planning

The continuity owner records dependencies, escalation contacts, recovery priorities, and exercise outcomes in an approved plan. Recovery tests use a controlled environment and do not expose real patient information.

Incident coordination

During a disruption, the continuity owner coordinates with the Emergency Code and Incident Communication policy. Visitor-facing instructions are coordinated with Visitor Access and Conduct. These references form a deliberate cycle for the dependency-graph demonstration.

Access

This seeded policy is restricted to Admin to demonstrate SQL permission filtering. Its example dependency links do not grant access to referenced policies.
