Hand Hygiene for Clinical Staff

Synthetic educational example | Not clinical, legal, or operational guidance

Document ID: DEMO-IC-002

Status: Synthetic training example

Review interval: 12 months

Purpose

This fictional policy describes a hand-hygiene reminder for clinical staff. It is a teaching example, not a clinical protocol. Follow the facility's approved infection-prevention guidance.

When to clean hands

Clean hands at the locally defined points before and after patient contact, before a clean task, after exposure risk, and after contact with the patient's surroundings. Use the hand-cleaning method approved for the situation and the facility.

Safe workflow

Keep hand-cleaning supplies available, follow product instructions, and report empty dispensers or equipment problems. Gloves do not replace hand hygiene. If hands are visibly soiled or a specific exposure requires a different method, follow the approved local procedure.

Training and acknowledgment

Assigned staff read the currently approved version and acknowledge that version in DocuGuard. Acknowledgment does not replace practical instruction or competency assessment.
